Gross Domestic Product

Gross Domestic Product (Second Estimate), Corporate Profits (Preliminary Estimate), 2nd Quarter 2025

Q2 2025 (2nd)	+3.3%
Q1 2025 (2nd)	-0.5%

Real gross domestic product (GDP) increased at an annual rate of 3.3 percent in the second quarter of 2025 (April, May, and June), according to the second estimate released by the U.S. Bureau of Economic Analysis. In the first quarter, real GDP decreased 0.5 percent. The increase in real GDP in the second quarter primarily reflected a decrease in imports, which are a subtraction in the calculation of GDP, and an increase in consumer spending. These movements were partly offset by decreases in investment and exports.

What is Gross Domestic Product?

A comprehensive measure of U.S. economic activity. GDP measures the value of the final goods and services produced in the United States (without double counting the intermediate goods and services used up to produce them). Changes in GDP are the most popular indicator of the nation's overall economic health.
